

True Divided Lites are synonymous with Quantum. In this union of wood and glass, the spacer inside the insulated glass unit must accurately align with the wood. Our ability to create true divided lites (TDLs) with millwork and glass aligned with care for precise sightlines is a testament to the skill and passion of our craftspeople.

TDLs can be designed and built for all our windows and doors and in any configuration desired.

## Millwork

Historically, TDLs were built with 5/8" or 7/8" muntins and worked just fine with single pane glazing. Today's insulating units require larger muntins and mullions. At Quantum we define a muntin as smaller than 2-1/4" and mullions when 2-1/4" or larger.

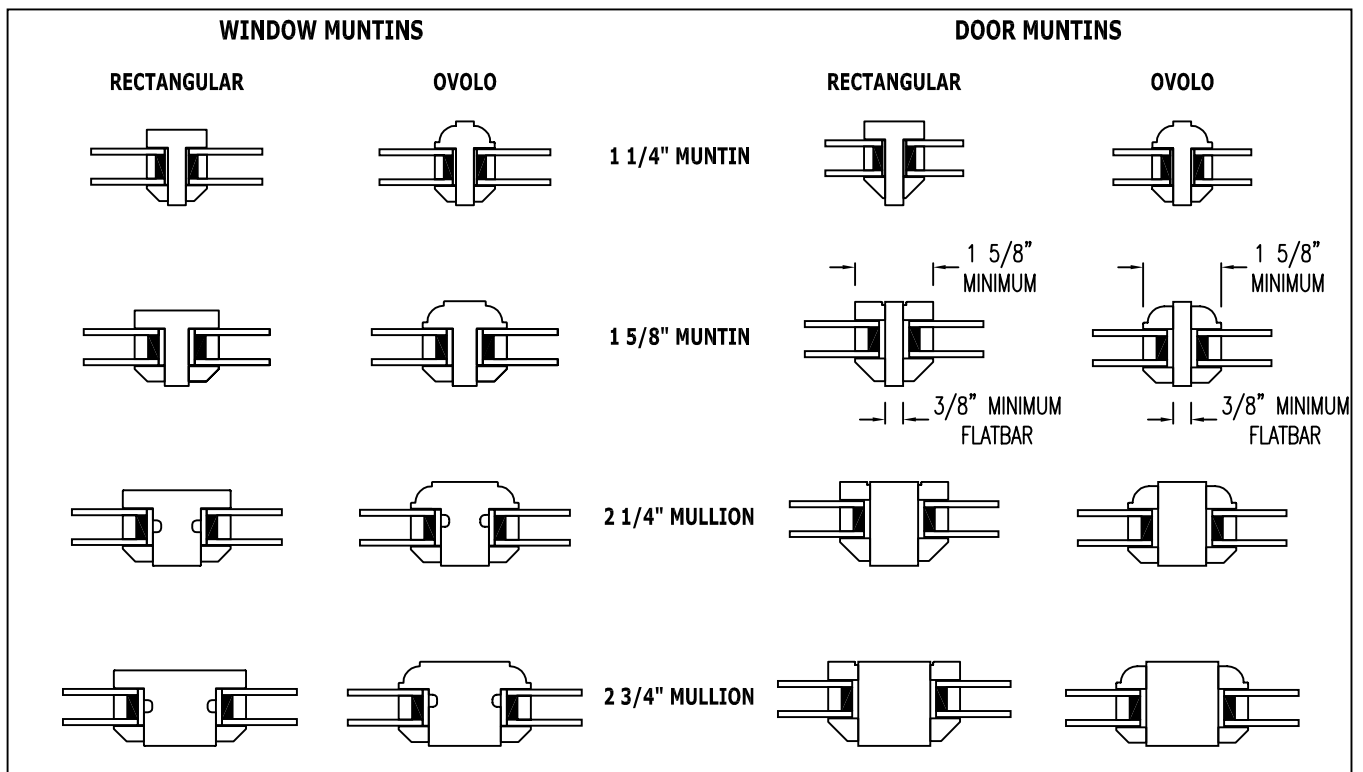

True divided lites are available in two standard profiles, Rectangular and Ovolo, and four different millwork selections are available.

## Exterior Stops

Removable stops are standard on all Quantum true divided lites. They are easily removed should maintenance require access to the glass. No interior millwork is disturbed.

## Custom Designs

There are no standard TDL patterns at Quantum—we build to specification. We welcome the challenges of the design community and are constantly working with intricate and unusual designs.
