

QUANTUM CLAD

PERFORMANCE HAS A NEW STANDARD

DESIGN FLEXIBILITY Our proprietary stile and rail construction allow tremendous flexibility with regards to design, size, alignment and operation. Whether it's window walls with narrow sightlines, oversize casements or exceptionally large lift & slide systems, **Quantum Clad** technology allows you to realize your vision without compromising functionality or design.

PREMIUM WOODS & EXCEPTIONAL CRAFTSMANSHIP **Quantum Clad** window and door profiles are milled from hand selected premium woods that have been grain and color matched for consistency, performance and aesthetic design. All **Quantum Clad** wood surfaces, including glazing pockets, jambs, gasket kerfs, hinge and hardware mortises, are fully sealed prior to cladding.

INNOVATION **Quantum Clad** is a system engineered to promote durability and performance in extreme environments. Unlike systems where cladding is applied directly to the wood, **Quantum Clad** is surface mounted to allow air flow between the fully finished wood and the extruded aluminum cladding.

ATTENTION TO DETAILS Quantum has amongst the highest standards for joinery, optical quality and finish in the industry. Combining 30 years of expertise in wood window construction with innovative Research & Development in cladding technology has produced a product that will exceed your expectations on every level.
