

## Hinged and Pivot Doors

At Quantum, we understand the complexities of building doors that are strong, secure, and exceptionally well crafted. Not only are Quantum doors beautiful in appearance, their quality is tangible with every operation.

Quantum's **Hinged and Pivot** doors utilize stile and rail construction. Whether building with engineered Douglas Fir core or using optional slab construction, Quantum's **Hinged and Pivot** doors are unsurpassed in appearance, performance and durability.

Quantum's doors are available in many designs, configurations and operations. We build pivot doors, single and double hinged doors, solid panel, raised panel, dutch doors and any variation in between. We offer a wide variety of species as well as operable sidelites, custom glazing and true divided lites. We can accommodate a range of hardware options, along with a choice of high performance teak, sapele or aluminum sills.

We build the same quality into our interiors doors and offer them in all of our finish options, including raw, primed, painted or clear coat. Whether it be painted finish, Clear Vertical Grain (CVG) Douglas Fir with raised panels, or an exotic hardwood, we can build any door you can imagine.

In applications where a clad product may be more desirable, we have added **Quantum Clad** to our list of door options. Ask your Quantum Representative about the available styles, colors and pricing.
